# TBE VMI USB Scanner Description – 03/15/12

When using the USB Scanner you will need to have the Scan Sync Utility to transfer the products from the usb scanner to the pc. The Scan Sync Utility will display what the user scanned and has options like changing quantities, deleting lines, etc... This is an ideal solution for when you want your customers to scan in their own orders.

To submit the order you simply select the "Submit Orders" button. It will send the order to our cloud server and also send you an email letting you know orders are ready to be imported. Auto order import is coming soon where there is no user interaction to get the order into TBE. TBE can be set to print a pick ticket or acknowledgment automatically at the time the order is submitted.
